meters and scales**
- **20mA Active and Passive  
Current Loop, RS-232 and  
RS-422 connections**
- **Selectable protocol and data  
strings make configuration  
fast and simple**

The RL16s Universal Remote is a low-cost 1" High, 6 digit remote digital display designed for use in a wide variety of applications and environments. Although not intended for use in the direct sun, the Super-Bright display elements are easy to see up to 50 feet away, even in bright lighting.

Connections for the most popular serial data ports are standard, making the RL16s the right choice for data display from checkweigh scales, filling systems, bulk baggers, floor scales, railroad and truck scales, and temperature, pressure, or flow sensors with digital output ports.

Options for Stainless Steel enclosures, Hazardous Area configurations, including Class I, Div. 1, and custom programming provide the flexibility required to satisfy any application.
